***Allowance of Application # 09/941,952***

1. The following communication is in response to applicant's amendment received 23-May-2005, and applicant's IDS received on 20-July-2005.

***Reasons for Allowance***

2. The following is an Examiner's Statement of Reasons for the indication of allowable subject matter. The instant application is directed to a non-obvious improvement over the invention described in U.S. Patent No. 5,220,512, the improvement comprising an apparatus and method for simulating a logic design comprised of combinatorial logic and state logic, wherein clock domains are identified for combinatorial logic and state logic using separate graphic elements, computer code is generated based on the clock domains that simulate operation of portions of the logic design, and the computer code is associated with the graphic elements. This patentable distinction is included in each of the independent claims, nos. 1, 11, and 21. The art of record, either individually or in combination, fails to teach, suggest, or render obvious the useful, concrete and tangible <simulation of a logic design comprised of combinatorial logic and state logic strength> having the corresponding structure which is disclosed in the specification and equivalents thereof at least at page 2, line 17 through page 17, line 4, and Figures 1-7. In view of the foregoing, the claims of the present application are found to be patentable over the prior art.

***Response Guidelines***
